

# Passive Lifestage Strategy

## Mandate description

The core objective of this alternative default investment strategy aims to meet each member's savings requirement by working towards a target date, which would be the Normal Retirement.

## How the Passive Lifestage Strategy works

The investment strategy consists of two phases and members are automatically switched from one phase to another as they near retirement. The two phases are:

- Accumulation phase
- Preservation phase

As retirement approaches, this target date strategy invests in an investment portfolio that provides inflation beating returns with a 100% guarantee on the capital invested, but in the years prior to this greater emphasis is placed on achieving capital growth. Members with more than 6 years before reaching their Normal Retirement Age or Planned Retirement Age (if different) are fully invested in the Passive Lifestage Accumulation Portfolio which aims to achieve capital growth. Six years (72 months) before a member reaches his/her Normal Retirement Age or Planned Retirement Age (if different), the member is gradually switched from the Passive Lifestage Accumulation Portfolio to the Sanlam Capital Protection Portfolio by means of 50 monthly switches.

The Passive Lifestage Accumulation Portfolio invests in the Satrix Enhanced Balanced Tracker Fund.
