Commentary

Market Review

Global markets continued their upward trend in March, as better than expected economic data lifted sentiment and index performance followed suit. The US was specifically boosted by strong labour data, as the March payroll report showed an upside surprise, adding 303 000 jobs relative to the 200 000 that was anticipated by economists, thus reducing the expected likelihood of a June rate cut. Although the Chinese property market remains severely constrained, the nation's manufacturing activity expanded during the month, with PMIs rising from 49.1 to 50.8, now in expansionary territory. Revised data showed that Japan avoided a technical recession, with the country expanding 0.4% in Q4 2023.

While the US jobs report showed encouraging signs of the resilience of the economy, there remains some concern as to whether this could delay the US Federal Reserve (Fed)'s interest rate cuts for the year. This since markets have priced in lower rates for the second half of the year, as well as the fact that US inflation has now shown three months of higher than expected numbers.

The positive global equity momentum during March, meant a fifth consecutive positive month for global stocks with the MSCI World Index ending the month 3.21% stronger in dollar terms. Emerging market (EM) stocks lagged their developed market (DM) peers in March but ended in positive territory with the MSCI EM Index ending at 2.49% higher month-on-month (m/m) in dollar terms. The Semiconductor sector continued to drive the monthly performance of tech-related stocks higher, with mega-cap US stocks continuing their rally, and Nvidia leading the charge. Among this continued exuberance, the S&P 500 ended the month at 3.22% higher m/m. Alphabet also rallied in March as it announced plans to roll out its own AI technology across various parts of the healthcare sector, including plans to improve screening for cancer and other diseases. Global bonds and global property ended the month positively at 0.55% and 3.61% respectively, both in dollar terms. The Dow Jones Index was positive at 2.21% m/m in dollar terms and the FTSE gained 4.75% m/m in pound. The Euro Stoxx Index gained 4.38% for the month.

Outlook

Relative to the strategic asset allocation of the portfolio, the Global Cautious Tracker portfolio was positioned, going into March, slightly overweight to DM equities, underweight to bonds, and slightly underweight to cash.

Our DM equity tracker outperformed the global equity benchmark by 0.06%.

Our bond tracker performed slightly behind the Bloomberg Global Aggregate Bond Index by 0.01%.

Our income manager, utilised for cash management, underperformed its cash benchmark by 0.06%.

Overall, relative to the Fund's strategic asset allocation, tactical asset allocation contributed positively to returns, while tracker returns detracted 0.03% from performance. The net result was outperformance relative to our strategic asset allocation benchmark of 0.01%, but underperformance of 0.07% versus the portfolio's benchmark, the EAA Fund USD Cautious Allocation peer group.

The US Fed, European Central Bank and Bank of England are all still expected to cut interest rates in the second half of the year as they attempt to avoid the implications of persistently higher interest rates and thus undermining growth. While inflation has been trending towards central banks' respective targets, cutting interest rates too early or aggressively may also increase the risk of prolonging inflation. In China, weak consumption and investment continue to weigh on activity, despite improved manufacturing output and trade balance figures. In the euro area, activity is expected to rebound slightly after a challenging 2023, when high energy prices and tight monetary policy restricted demand. Many other economies continue to show great resilience, with growth accelerating in Brazil, India, and Southeast Asia's major economies.

We therefore currently maintain a balanced and broadly neutral stance to growth assets (such as equities and property), but with a more defensive bias. Similarly, while we retain a neutral approach to fixed income, we recognise that the risks and rewards for duration assets are finely balanced, and a dynamic and flexible attitude is warranted.
