

Fund Objective

The objective of the fund is to offer investors a reasonable level of current income and long-term wealth creation through active management of the portfolio.

Fund Strategy

This is an equity fund which diversifies across all sectors of the JSE and may invest a maximum of 45% in offshore assets. The fund invests in listed shares of financially sound companies that we think are mispriced by the market and offer exceptional value.

These companies:

- have favourable long-term economic characteristics,
- are run by a competent management team and
- trade at a price which is attractive when measured against the long term return potential and intrinsic value of a business.

The fund may also include participatory interests of collective investment schemes and listed and unlisted financial instruments (derivatives) for efficient portfolio management.

Tax Free Savings Account

This Fund qualifies as a tax free investment according to section 12T of the Income Tax Act, with effect from 1 March 2015. South African individuals qualify for the associated tax benefits namely no tax on dividends, income or capital gains whilst still enjoying all the benefits of a unit trust. Note contributions to tax free investments are limited to R36 000 per tax year, with a lifetime limit of R500 000. Amounts invested in excess of these permissible thresholds are taxable.

TER	1.63
TC	0.13
TIC	1.76
Performance Fee	—
TER Measurement Period	01 April 2020 - 31 March 2023

Total Expense Ratio (TER) is the percentage value of the Financial Product that was incurred as expenses relating to the administration of the Financial Product. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not necessarily be an accurate indication of future TER's. The TER and Transaction Costs cannot be determined accurately because of the short life span of the Financial Product. Calculations are based on actual data where possible and best estimates where actual data is not available.

Transaction Cost (TC) is the percentage value of the Financial Product that was incurred as costs relating to the buying and selling of the assets underlying the Financial Product. Transaction Costs are a necessary cost in administering the Financial Product and impacts Financial Product returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Financial Product, the investment decisions of the investment manager and the TER.

Total Investment Charges (TER + TC) is the total percentage value of the Financial Product that was incurred as costs relating to the investment of the Financial Product.

Manager Performance Fee (incl. VAT) | Performance Fee Benchmark: 87.5% of the FTSE/JSE Capped Shareholder Weighted Index (J433) and of the 12.5% MSCI World Net Total Return USD Index (NDDUWI), Base Fee: 1.53%, Fee at Benchmark: 1.53%, Fee Hurdle: 87.5% of the FTSE/JSE Capped Shareholder Weighted Index (J433) and 12.5% of the MSCI World Net Total Return USD Index (NDDUWI), Sharing Ratio: 20%, Minimum Fee: 1.53%, Maximum Fee: 3.42%, Fee Example: 1.53% p.a. if the fund performs in line with its Performance Fee Benchmark.

Administered by

Risk Profile

Aggressive

You can afford to take on a higher level of risk (i.e. will have a greater exposure to equities in your portfolio) because of your investment time horizon, or your appetite for risk. You know that in taking the risk, you need to be patient if you want to achieve the results. So you are willing to invest for the long-term and are prepared to tolerate some volatility in the short term, in anticipation of the higher returns you expect to receive in five years or beyond.

Glossary Terms

Active Stock-picking Process

This is when asset managers actively and tactically vary their stock selections based on economic and market data, and fundamental valuations, etc. This should lessen an investor's exposure to declining markets and helps preserve capital.

Annualised Returns

Annualised return is the weighted average compound growth rate over the period measured.

Asset Allocation

Asset allocation is the percentage holding in different asset classes (i.e. equities, bonds, property, etc.). It is used to determine the level of diversification in a portfolio.

Capital Growth

Capital growth is the profit made on an investment, measured by the increase in its market value over the invested amount or cost price. It is also called capital appreciation.

Distributions

The income that is generated from an investment and given to investors through monthly, quarterly, bi-annual or annual distribution pay-outs.

Derivatives

Derivatives are instruments generally used as an instrument to protect against risk (capital losses), but can also be used for speculative purposes. Examples are futures, options and swaps.

Feeder Fund

A feeder fund is a South African-based fund that feeds exclusively into its primary foreign-based fund. It allows investors easy access to investing in an offshore fund, eliminating complicated tax and other implications. The shares of the feeder fund represent shares in the primary fund (called a master fund).

Liquidity

The ability to easily turn assets or investments into cash.

Information Ratio

The Information Ratio measures the market risk-adjusted performance of an investment or portfolio. The greater a portfolio's Information Ratio, the better its risk-adjusted performance has been compared to the market in general.

LISP (Linked Investment Service Provider)

A Linked Investment Service Provider is a financial institution which packages, distributes and administers a broad range of unit trust based investments. Any investment made through these products gives an investor a single point of entry into a selection of different investments.

Maximum Drawdown

The maximum drawdown measures the highest peak to trough loss experienced by the fund.

Money Market Instruments

A money market instrument is a low risk, highly liquid, short-term (one year or less) debt instrument, issued by financial institutions or governments, that tend to have lower returns than high-risk investments.

Participatory Interests

When you buy a unit trust, your money is pooled with that of many other investors. The total value of the pool of invested money in a unit trust fund is split into equal portions called participatory interests or units. When you invest your money in a unit trust, you buy a portion of the participatory interests in the total unit trust portfolio. Participatory interests are therefore the number of units that you have in a particular unit trust portfolio.

Regulation 28

Regulation 28 of the Pension Funds Act sets out prudent investment limits on certain asset classes in investment funds. It applies specifically to investments in Retirement Annuities and Preservation Funds. The allowed maximum exposures to certain asset classes is: 75% for equities; 25% for property; 45% for foreign (offshore) assets.

Sharpe Ratio

The Sharpe Ratio measures total risk-adjusted performance of an investment or portfolio. It measures the amount of risk associated with the returns generated by the portfolio and indicates whether a portfolio's returns are due to excessive risk or not. The greater a portfolio's Sharpe ratio, the better its risk-adjusted performance has been (i.e. a higher return with a contained risk profile, where the portfolio manager is not taking excessive risk to achieve those returns).

Standard Deviation

Standard deviation (also called monthly volatility) is a measure of how much returns on an investment change from month to month. It is typically used by investors to gauge the volatility expected of an investment.

Undervalued Equity Stocks/ Investing in Neglected Global Equities

This is a strategy of selecting shares that trade for less than their intrinsic values. Value investors actively seek stocks that they believe the market has undervalued. They believe the market overreacts to good and bad news, resulting in stock price movements that do not correspond with the company's actual long-term fundamentals. The result is an opportunity for value investors to profit by buying when the price is deflated.

Additional Information

All reasonable steps have been taken to ensure the information on this MDD is accurate. The information to follow does not constitute financial advice as contemplated in terms of the Financial Advisory and Intermediary Services Act. Use or rely on this information at your own risk. Independent professional financial advice should always be sought before making an investment decision. The Sanlam Group is a full member of the Association for Savings and Investment SA. Collective investment schemes are generally medium- to long-term investments. Please note that past performances are not necessarily a guide to future performances, and that the value of investments / units / unit trusts may go down as well as up. A schedule of fees and charges and maximum commissions is available on request from the Manager. Sanlam Collective Investments (RF) Pty Ltd, a registered and approved Manager in Collective Investment Schemes in Securities. Additional information of the proposed investment, including brochures, application forms and annual or quarterly reports, can be obtained on request from the Manager, free of charge. Collective investments are traded at ruling prices and can engage in borrowing and scrip lending. Collective investments are calculated on a net asset value basis, which is the total market value of all assets in the portfolio including any income accruals and less any deductible expenses such as audit fees, brokerage and service fees. Actual investment performance of the portfolio and the investor will differ depending on the initial fees applicable, the actual investment date, and the date of reinvestment of income as well as dividend withholding tax. Forward pricing is used. The Manager does not provide any guarantee either with respect to the capital or the return of a portfolio. The performance of the portfolio depends on the underlying assets and variable market factors. Performance is based on NAV to NAV calculations with income reinvestments done on the ex-div date. Lump sum investment performances are quoted. The portfolio may invest in participatory interests of other unit trust portfolios. These underlying funds levy their own fees, and may result in a higher fee structure for our portfolio. All the portfolio options presented are approved collective investment schemes in terms of Collective Investment Schemes Control Act, No 45 of 2002 ("CISCA"). The Manager may borrow up to 10% the market value of the portfolio to bridge insufficient liquidity. The fund may from time to time invest in foreign countries and therefore it may have risks regarding liquidity, the repatriation of funds, political and macroeconomic situations, foreign exchange, tax, settlement, and the availability of information. The fund may invest in financial instruments (derivatives) for efficient portfolio management purposes. The Manager has the right to close any portfolios to new investors to manage them more efficiently in accordance with their mandates. Management of the portfolio is outsourced to Denker Capital (Pty) Ltd, (FSP) Licence No. 47075, an Authorised Financial Services Provider under the Financial Advisory and Intermediary Services Act, 2002. Sanlam Collective Investments (RF) (Pty) Ltd retains full legal responsibility for the co-named portfolio. Standard Bank of South Africa Ltd is the appointed trustee of the Sanlam Collective Investments scheme. Sources of Performance and Risk Data: Morningstar Direct, INET BFA and Bloomberg. The risk free asset assumed for the calculation of Sharpe ratios: STEFI Composite Index. The highest and lowest 12-month returns are based on a calendar year period over 10 years or since inception where the performance history does not exist for 10 years. Obtain a personalised cost estimate before investing by visiting www.sanlamunittrustsmdd.co.za and using our Effective Annual Cost (EAC) calculator. Alternatively, contact us at 0860 100 266.

Portfolio Manager Quarterly Comment

Quarter to June 2023

Market review

Global markets

It has been a year of two halves. The first quarter's banking stress in the US resulted in a sharp repricing of the likely path for interest rates. The 2-year bond yield in the US rallied from a high of 5.07% on 8 March to a low of 3.78% a few weeks later. In Q2, global markets delivered very attractive returns. This performance was largely due to robust economic growth data, moderating inflation numbers, resolution on the US debt ceiling standoff and lower risk. The 2-year bond yield rose to 4.88% at the end of the quarter, the price of gold - which had a very strong run in March (coincident with US bank stress) - gave back some of these gains in the quarter. YTD global market performance has been notable for the very narrow returns - i.e. a large part of market returns have been driven by only a handful of shares. The strong run has not been the result of a broad rally in shares or sectors.

Finally, no commentary would be complete without noting the rebellion of the CEO of the Wagner group in Russia. Speculation about the implications and consequences of these events are rife, we'll be keeping a close eye on how these events play out.

At a sector level, during Q2 the strongest performing sectors were once again technology (+16%), consumer discretionary (+10.9%) and communication services (+9.6%). This is attributed to a great extent by the inflation and interest rate outlook that has improved somewhat during 2023. The technology performance has been due to the breakthroughs that have been made in the field of AI technology. The semiconductor subsector was a notable outperformer, with Nvidia leading the pack.

Sector laggards were mainly sectors that are more defensive in nature such as consumer staples, healthcare and utilities. These sectors were essentially flat during Q2.

South African markets

South Africa had a very tough quarter. Substantial amounts of loadshedding weighed on the economy in the first half. More recently lower consumption, improved performance of the generation plants (i.e. reduced unplanned outages) and heavy winds contributed to better than expected energy availability. In addition to the burden of loadshedding, allegations by the US ambassador to South Africa that arms had been loaded onto *Lady R*, the Russian vessel that docked in Simonstown in December, had a severely negative impact on the value of domestic assets. The rand weakened from R18.33 at the start of the week to R19.81 two weeks later. Government bonds with 10 years to maturity saw yields rise from 10.1% to 11.3% over the same period. The value of the domestic equity market, with its large weight to foreign companies and earnings were far more resilient.

The FTSE/JSE Capped Swix was up 1.2% in the second quarter. The SA financial index generated a positive return of 5.3% and industrials generated 3.4%, while the resource index suffered a loss of 6.1%. The SA market underperformed global markets as domestic news caused the exchange rate to weaken by 5.9% against the US dollar for the quarter.

Portfolio review

Forecasting returns is not for the faint hearted. Who would've predicted, six months ago, with the world facing high inflation, rising interest rates, and a potential recession that the MSCI World Index would be up 15.4% in US dollar terms, with North America gaining 16.7%? It is a reminder that long-term returns are generated by time in the market, not by trying to 'time the market'.

The Rand (ZAR) has been under tremendous pressure this year, depreciating by 11% relative to the US dollar for the period ending 30 June 2023. Our loadshedding challenges and political blunders have paid a significant role in this weakness. This has clearly impacted the performance of domestic SA Inc. stocks negatively relative to the 'rand hedge' stocks that are listed in SA. Stocks like Richemont and Aspen are up 43.6% and 33.4% respectively on a YTD basis. We own both in the portfolio. Naspers and Prosus are up 20% and 17% respectively. The recent announcement that they will simplify their shareholding structure and eliminate the cross holding between Naspers and Prosus is a positive development. Fortunately, we have large holdings in both.

Unfortunately, we gave back some of this performance over the last quarter with the performance of stocks like Libstar (down 18.6%), Northam (down 13%) and Sun International (down 20.3%). We still see significant value potential in all three of these holdings.

Notwithstanding the macro challenges, the current environment has offered opportunities for us to add to good quality, well managed businesses that are offering significant upside to intrinsic value. We recently added Pick 'n Pay to the portfolio. Although the recent increase in loadshedding costs is having a negative impact on margins in the short term, the new CEO, Pieter Boone, is having a positive impact on the business. We see improved market share gains over time, with scope to dramatically improve profitability. In addition, we have added to our existing holdings in AVI and Ninety One, both high quality, well managed businesses.

As mentioned in our last quarterly comments, the outlook both globally and locally remains uncertain, given the higher levels of inflation and uncertain interest rate outlook as well as the potential for the world to enter a recession. However, there are always opportunities to exploit. In South Africa, our universe of approximately 100 stocks still offers attractive

investment opportunities. Based on our research: The median stock in our universe is on a one year forward price to earnings (PE) multiple of 9.4x, with an average forward dividend yield of 5%; the average normalised return on equity of our portfolio is 24%; and the median normalised PE multiple in the portfolio is 9.2x. These metrics remain attractive relative to historical levels. Buying equities at these levels has historically proven to offer good long-term returns for investors. After all, long-term returns are highly dependent on the price you pay.
