Risk Reward Profile: High

Typically, the lower the risk, the lower the potential return and the higher the risk, the higher the potential return. There is no guarantee that returns will be higher when investing in a portfolio with a higher risk profile. The risk profile for this portfolio is rated as high, as it may invest up to 100% in equity securities globally.

*Total Expense Ratio (TER):

Period: 1 Jan 2024 to 31 Dec 2024

The TER disclosed is for the A Class and reflects the % of the value of the Fund that was incurred as expenses relating to the administration of the Fund over a period of 1 year. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The Current TER may not necessarily be an accurate indication of future TER's. The financial year end TER is 1.01%, calculated over a 12-month period to Ci Global Investments RIAIF ICAV's last financial year end, 31 December 2024.

RISK DEFINITIONS

Compliance Risk

This refers to the risk of not complying with the legislation, regulations, prescribed investment limits and internal policies and procedures by the manager or the portfolio manager.

Concentration Risk

Unit Trusts pool the assets of many investors and use the proceeds to buy a portfolio of securities. There are regulations in place which limit the amount that a unit trust may invest in securities, thereby spreading the risk across securities, asset classes and companies.

Credit Risk

Credit risk is where an issuer of a non-equity security may not be able to make interest payments or repay the capital. This will impact the value of the unit trust.

Currency Risk / Foreign Exchange Risk

This risk is associated with investments that are denominated in foreign currencies. When the foreign currencies fluctuate against the South African Rand, the investments face currency gains or losses.

Inflation Risk

The risk of potential loss in the purchasing power of your investment due to a general increase of consumer prices.

Liquidity Risk

This relates to the ability of the unit trust to trade out of a security held in the portfolio at or near to its fair value. This may impact on liquidity and in the case of foreign securities, the repatriation of funds.

Market Risk

Equity markets are volatile and the price of equities fluctuate based on a number of factors such as changes in the economic climate, general movements in interest rates and the political and social environment which will also affect the value of the securities held in the unit trust, thereby affecting the overall value of the unit trust.

Political Risk

The risk that investment returns could suffer as a result of a country's political changes or instability in the country. Instability could come from changes in the country's government, policy makers or military.

Settlement Risk

Settlement risk arises when a fund is exposed to credit risk on parties with whom it trades securities, and may also bear the risk of settlement default, in particular in relation to debt securities such as bonds, notes and similar debt obligations or instruments

Tax Risk

This risk relates to any change to tax laws or to the interpretation of existing tax laws which has an impact on the manner in which unit trusts are taxed.
